CAPABILITY STATEMENT

Software engineering | Technical analysis | Verification

COMPANY PROFILE

Hectagon Technologies develops software solutions for technical and engineering workflows. Our work centers on clear requirements, maintainable implementation, and documented verification—so customers can understand what was built, how it was tested, and what remains to be resolved.

CORE CAPABILITIES

• **Software engineering:** application development, maintenance, defect investigation, and technical documentation.

• **Engineering analysis:** software-supported technical review, structured data processing, and reporting.

• **Workflow automation:** repeatable task flows, exception handling, and traceable outputs.

• **Quality and verification:** requirements-based checks, regression testing, issue tracking, and review evidence.

DELIVERY APPROACH

Define the requirement → assess the system → implement the solution → test against acceptance criteria → deliver documented results.

TECHNICAL EVIDENCE

Software demonstrations, test reports, and project-specific qualifications can be supplied when available and applicable. Experience, staffing, certifications, and performance commitments are documented for each opportunity rather than presumed.

GOVERNMENT CONTRACTING DETAILS

Legal business name	Hectagon Technologies LLC
UEI	To be published after verification
CAGE code	To be published after assignment and verification
NAICS codes	To be published after confirmation
